Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 6-10 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent no. 4,644,587 to Takahashi.

Regarding claims 6 and 7, Takahashi discloses in Figure 5, a method/apparatus of a communication arrangement for connecting together a plurality of nodes, said arrangement comprising: at least one opto-electronic transducer 502 each connected to one of said plurality of nodes 570-1, 570-2, ..., 570-n, each transducer 500 for generating a first electrical output signal in response to an optical input signal from one of said nodes (Col. 6, lines 62-64); and each transducer 500 for determining a value of said electrical output signal (e.g., by collision detector 510, and outputting, during a period of time when there is an absence of an input optical signal from said one node (e.g., when a collision occur, the transmitting signals can not reach to a receiving end), a second electrical signal as an error signal (e.g. collision signal is generated by the collision generator) when said relative value of said electrical signal is less than a predetermined value (Col. 7, lines 8-61).

Regarding claims 8-10, Takahashi discloses wherein said error signal (e.g. collision signal) is stored in a memory (e.g., latch 711) and the step of reading out a status of said memory element is addressable (col. 10, lines 43-64).

Response to Arguments

3. Applicant's arguments with respect to claims 6-10 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dzung D Tran whose telephone number is (571) 272-3025. The examiner can normally be reached on 9:00 AM - 7:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on (571) 272-3022. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
